

IN THE SPECIFICATION

Please amend the paragraphs of the specification as follows:

Page 12, the Paragraph beginning with the words "The usage of the fundamental..."

---

The usage of the fundamental channel can be regulated by signaling channel frames which are transmitted on the control channel. In the exemplary embodiment, allocation of the logical signaling channel frames is performed by an indicator bit within the control channel frame. The process fundamental indicator bit informs remote station 6 whenever there is information directed to remote station 6 on the fundamental channel in the next frame. FIG. 10 is a flow-chart of the operation.
